About

ABOUT NASSCOM AND FUTURESKILLS

NASSCOM (National Association of Software and Service Companies)

NASSCOM is India's leading industry association for the IT, IT-enabled services, and emerging technology sectors, committed to driving innovation, digital excellence, and global competitiveness. It plays a pivotal role in shaping industry standards, influencing policy, and fostering collaboration between government, academia, and enterprises. Through its initiatives, NASSCOM empowers India's tech ecosystem with future-ready talent, research insights, and programs that accelerate digital transformation across industries.

FutureSkills Prime is a digital skilling initiative by NASSCOM, developed in partnership with the Government of India, aimed at building a future-ready workforce. It offers industry-vetted courses, certifications, and learning pathways in emerging technologies like AI, Data Science, Cloud, and Cybersecurity to help professionals upskill and stay competitive.

About

THE IOT ACADEMY

The IoT Academy, established in **2017** is a fast emerging company imparting quality programs for skills training, internship and guidance in cutting edge technologies like **Data Science, Machine Learning, Artificial Intelligence, Internet of Things, Embedded Systems & many more** and focused on helping people develop the skills they need to thrive in the rapidly growing digital economy.

The IoT Academy has collaborated with various premier institutes e.g. **E&ICT Academy, IIT-Guwahati, IIT-Roorkee and IIT-Kanpur** for **Advance Certification courses** to take provide outcome-centric solutions to help them achieve their professional goals.

91%
Happy Outcomes

Quality education and career opportunities shouldn't come at a high cost. While many ed-tech companies prioritize profits, **The IoT Academy** is committed to transforming students lives. We make premium professional education accessible to the masses at just 10% of the market cost.

The IoT Academy
Connecting The Unconnected

Forbes INDIA

We are proud to share that

The IoT Academy

has been featured in **Forbes India** under

- ✦ "Visionary Companies Building India's Future"
- ✦ Ranked #2 Nationwide

This recognition reflects our unwavering mission to empower learners with future-ready skills!

- ✦ From classrooms to careers...
- ✦ From learners to innovators...
- ✦ From ambition to achievement...

A heartfelt thank you to our students, mentors, industry partners, and community for trusting us and growing with us.

The journey has just begun.
Bigger milestones ahead.

AWARDS & RECOGNITIONS

AWARDS & RECOGNITIONS

FACULTY DEVELOPMENT PROGRAMS (FDPS)

- Conducted multiple intensive workshops for college faculty on AI-driven signal processing techniques.
- Delivered hands-on training using Edge Impulse, Python, and Hugging Face to build and deploy real-world AI models.
- Empowered educators to seamlessly integrate advanced AI/ML algorithms into their teaching and research.

INDUSTRIAL VISITS FOR STUDENTS

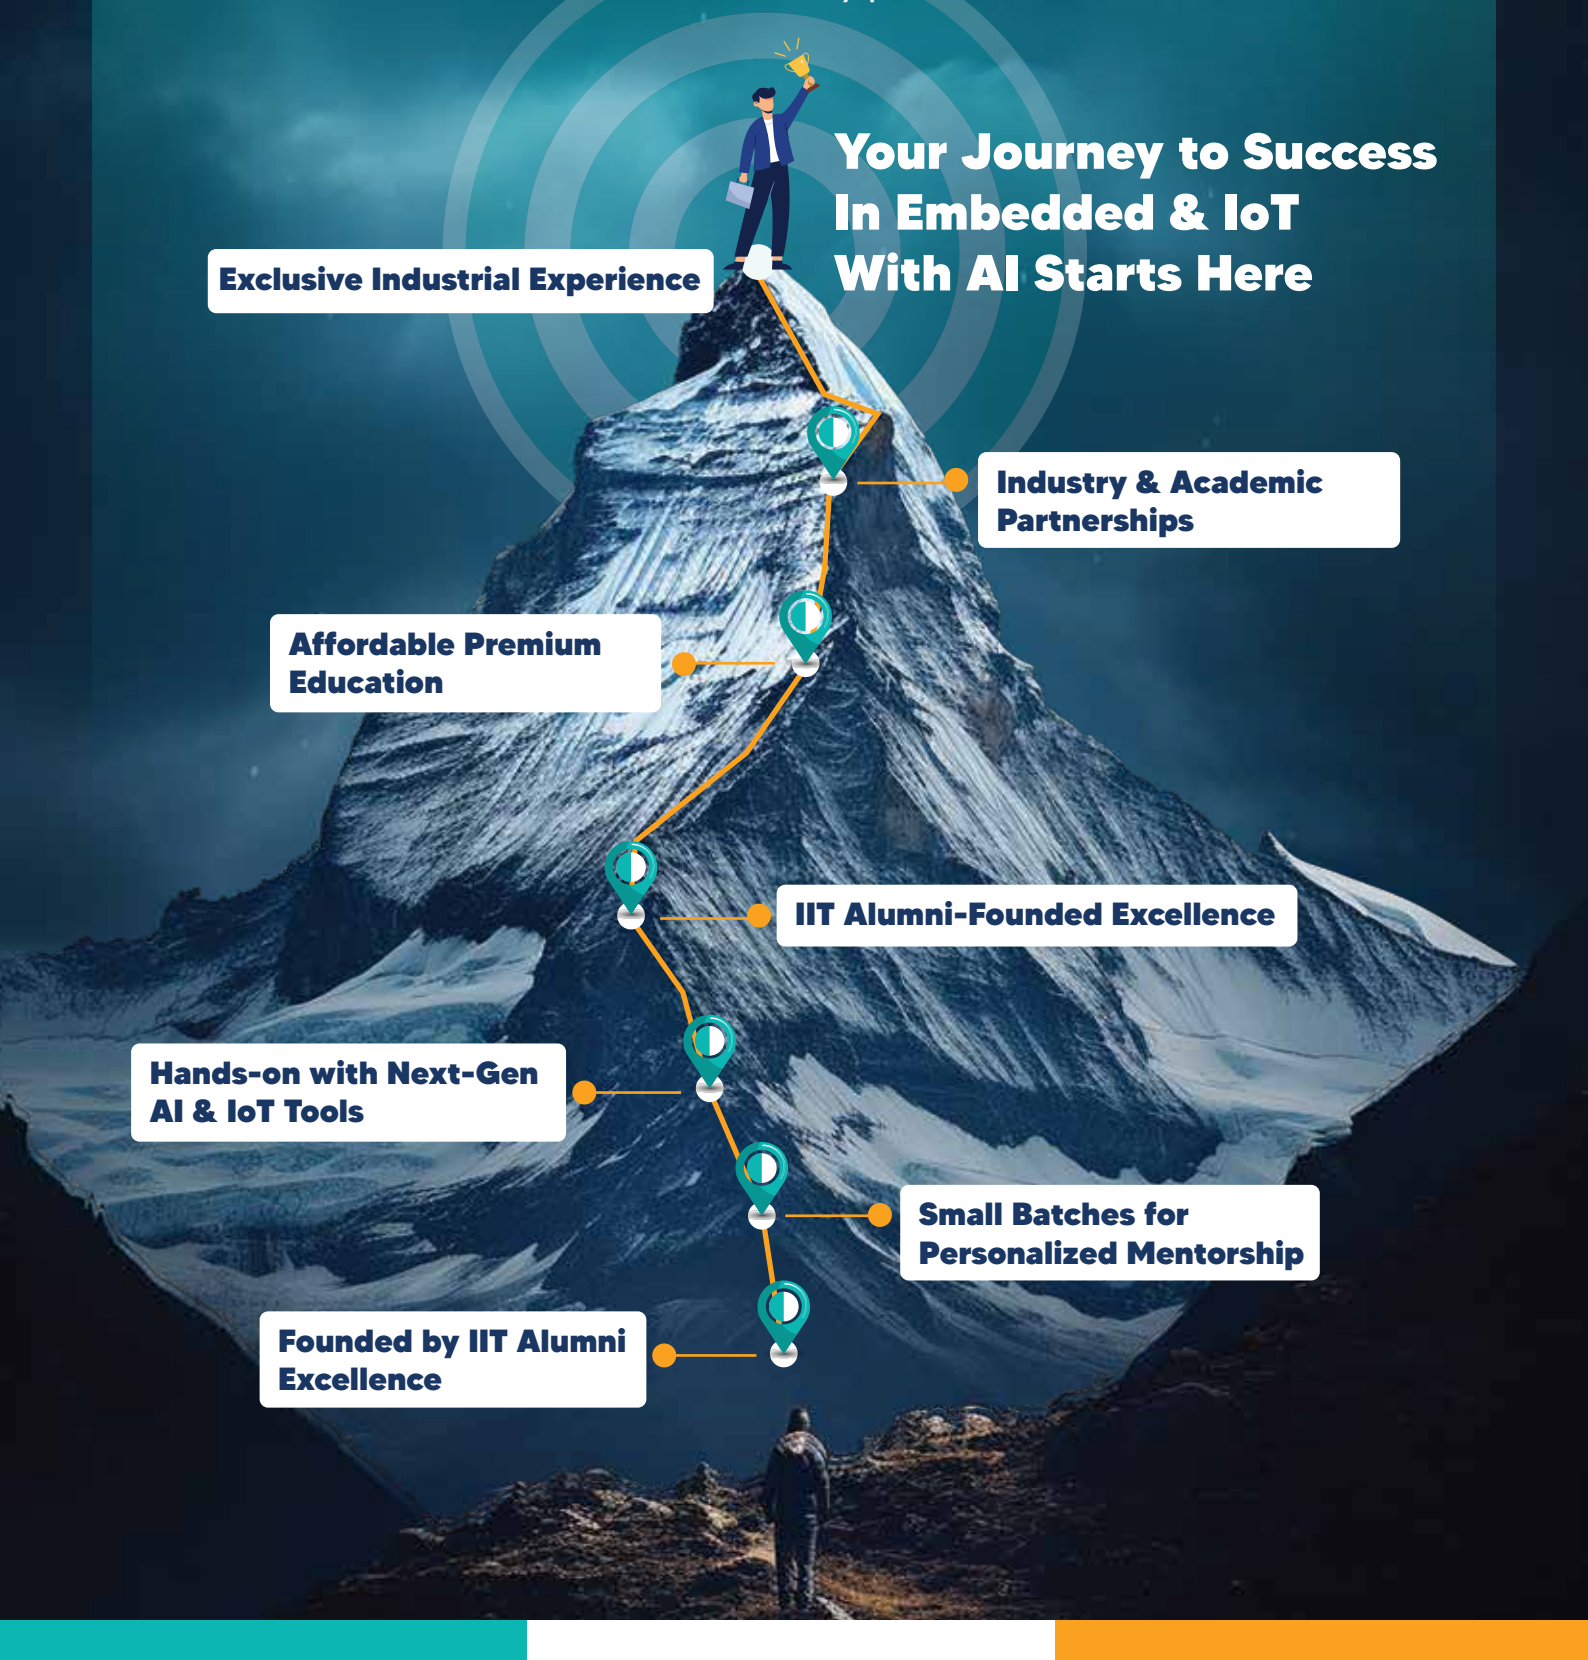

- Organized immersive visits to leading IoT manufacturing facilities and smart-factory labs.
- Enabled learners to observe real-world deployment of embedded systems, edge computing, and sensor networks.
- Fostered practical insights through direct interaction with industry engineers and live project demonstrations.

WHY THE IOT ACADEMY IS THE RIGHT CHOICE FOR YOU?

WHY THE IOT ACADEMY IS YOUR EMBEDDED AI & IoT PARTNER

Building embedded AI devices demands robust hardware expertise and advanced AI algorithms, your career does too.

Our

ADVANCED EMBEDDED SYSTEMS & IOT LAB

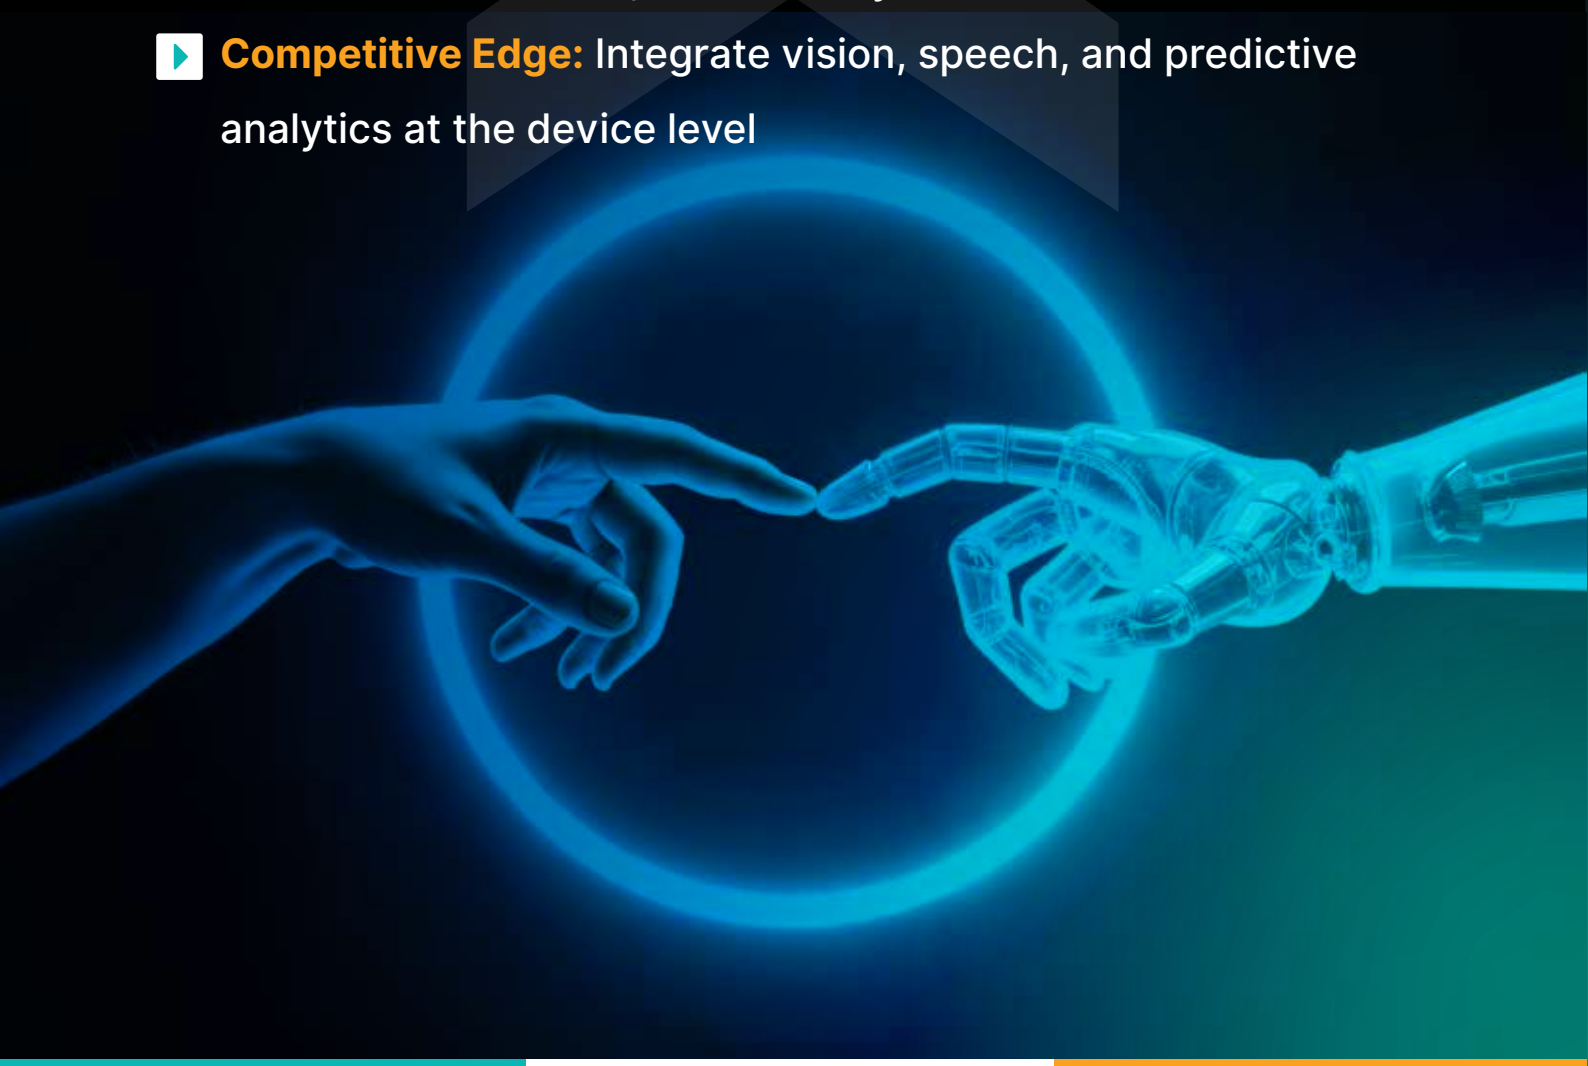

Our state-of-the-art Embedded & IoT Lab is designed to give learners hands-on exposure to the technologies that are shaping the future. The lab is equipped with industry-grade hardware, advanced development boards, real-time sensors, and smart IoT devices, allowing students to build, test, and deploy innovative solutions just like professionals in the field.

The facility provides an end-to-end learning environment—from embedded programming and circuit design to cloud-connected IoT deployments and AI-enabled edge applications.

Why Learn
EMBEDDED SYSTEMS AI & IoT

- **Explosive Demand:** Edge AI market growing at 35% CAGR through 2030
- **Higher Earnings:** AI-enabled engineers command 70% salary premium
- **Future-Ready:** 60% of IoT devices to have onboard AI by 2028
- **Innovation:** Deploy intelligent solutions for smart homes, autonomous vehicles, and Industry 4.0
- **Competitive Edge:** Integrate vision, speech, and predictive analytics at the device level

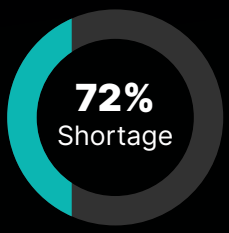

GLOBAL MARKET OPPORTUNITY

Job Title Recognition:
"Future-Defining Job of the 21st Century" – Embedded Systems, IoT & AI Engineering

Report By glassdoor

Talent Shortage:
72% shortage of engineers skilled in Embedded Systems + IoT + AI integration.

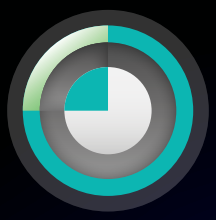

Market Growth:

- 38% CAGR Embedded–IoT–AI convergence market in India
- 35%+ annual job growth through 2030
- Growing much faster than traditional electronics or software roles

38% Market Growth

35% Annual Job Growth

Market Opportunity:
Global Embedded IoT + AI market projected to reach $250B+ by 2032

$250B+ Market

Supply vs Demand Gap:
Only 5–7% engineers possess advanced Embedded + IoT + AI skills
70–90% higher salaries for experts in AI-enabled IoT, Smart Devices & Edge AI
85% enterprises will deploy AI-powered IoT systems & Edge Intelligence by 2027

Industry Trust:
400+ Hiring Partners | 6200+ Success Stories | 95% Placement Rate

Momentum:
Embedded–IoT–AI ecosystem growing at 38% CAGR
Job demand rising 35%+ annually through 2030

PROGRAM HIGHLIGHTS

PLACEMENTS & HIRING

PROGRAM CURRICULUM

Embedded Systems with AI Integration

Program Curriculum

MODULE 1

Introduction to Embedded Systems

- Evolution of embedded systems
- Microcontrollers vs Microprocessors
- Embedded applications in automotive, healthcare, consumer electronics, and IoT
- Development tools: IDEs, toolchains, debuggers

Lab: Setting up Arduino/ESP32 or STM32 development board, "Hello World" LED blink.

MODULE 2

Embedded C & Low-Level Programming

- C basics for embedded (data types, pointers, bit manipulation)
- Memory organization (stack, heap, registers)
- I/O mapping and register-level programming

Lab: GPIO programming, reading switches, driving LEDs.

MODULE 3

Interfacing & Peripherals

- ADC/DAC concepts
- Timers, PWM, interrupts
- Serial protocols: UART, I2C, SPI

Lab: Interface a temperature sensor + display output on serial monitor.

Program Curriculum

MODULE 4

Embedded Hardware Basics

- Sensor & actuator overview
- Memory (EEPROM, Flash, SRAM)
- Power supply, clock system, watchdog timers
- Intro to Embedded Linux

Lab: Work with external EEPROM, log sensor data.

MODULE 5

Real-Time Operating Systems (RTOS)

- Multitasking concepts
- Scheduling (preemptive, cooperative)
- Tasks, semaphores, queues, mutexes
- FreeRTOS / Zephyr basics

Lab: Create multiple tasks with priorities on FreeRTOS.

MODULE 6

Embedded Linux

- Bootloaders & kernel basics
- Device drivers introduction
- Cross-compilation, GPIO access from Linux

Lab: GPIO programming on Raspberry Pi.

Program Curriculum

MODULE 7

IoT Communication Protocols

- WiFi, Bluetooth/BLE 5, Zigbee
- LPWAN: LoRaWAN, NB-IoT
- Application protocols: MQTT, CoAP, HTTP

Lab: Send sensor data to MQTT broker using ESP32/STM32 + WiFi.

MODULE 8

IoT Security & OTA Updates

- Security threats in IoT
- Encryption (TLS/DTLS)
- Secure boot & firmware signing
- OTA firmware updates

Lab: Implement a secure MQTT connection with TLS.

MODULE 9

IoT Architecture

- Edge, Gateway, Cloud
- Device identity & provisioning
- Scalability in IoT systems

Lab: Set up an IoT gateway to forward sensor data to cloud.

Program Curriculum

MODULE 10

Cloud Platforms

- AWS IoT Core, Azure IoT Hub, Google IoT
- Open-source platforms (ThingsBoard, Node-RED, Mosquitto)
- REST APIs, WebSockets

Lab: Push IoT sensor data to ThingsBoard dashboard.

MODULE 11

Data Analytics & IoT Dashboards

- Data storage (SQL/NoSQL, Time-series DBs)
- Visualization tools (Grafana, Power BI)
- IoT analytics use-cases

Lab: Build a real-time dashboard for temperature & humidity monitoring.

MODULE 12

Edge AI & TinyML

- Introduction to TinyML (TensorFlow Lite Micro, Edge Impulse)
- Running ML on constrained devices
- Use cases: anomaly detection, predictive maintenance

Lab: Deploy a simple ML model on MCU for gesture recognition.

Program Curriculum

MODULE 13

Low-Power & Energy Harvesting IoT

- Power management techniques
- Battery optimization & estimation
- Energy harvesting (solar, vibration, RF)

Lab: Implement sleep/wake cycles to extend battery life.

MODULE 14

Industrial IoT & Smart Systems

- Industry 4.0 concepts (IIoT)
- PLC/SCADA integration
- Protocols: OPC-UA, Modbus
- Smart home & Matter protocol (latest standard)

Lab: Build a simple smart home setup (e.g., light automation with mobile app).

MODULE 15

Capstone Project Development

- Proposal & system design
- Hardware selection & firmware development
- Cloud integration & security layer

MODULE 16

Final Project Demo & Evaluation

- Testing & debugging
- Performance analysis (latency, power, security)
- Final presentation & submission

Program Curriculum

MODULE 17

Introduction to AI for IoT

- What is AIoT?
- Use cases: predictive maintenance, smart cities, healthcare
- AI workflow (data → model → deployment)

Lab: Collect sensor data for AI training.

MODULE 18

Machine Learning Basics

- ML concepts: classification, regression, clustering
- Supervised vs unsupervised learning
- Libraries: Scikit-learn, TensorFlow

Lab: Train a simple ML model on collected IoT data.

MODULE 19

TinyML (Machine Learning on Microcontrollers)

- Introduction to TinyML & TensorFlow Lite Micro
- Limitations of constrained devices
- ML optimization (quantization, pruning)

Lab: Deploy gesture recognition model on Arduino/ESP32.

Program Curriculum

MODULE 20

Computer Vision on Edge Devices

- Edge AI with cameras
- Object detection basics (MobileNet, YOLO-lite)
- Use cases: surveillance, smart farming

Lab: Run face/object detection on Raspberry Pi.

MODULE 21

AIoT System Architecture

- Integration of AI models into IoT pipelines
- Edge inference vs cloud inference
- Hybrid AIoT design patterns

Lab: Deploy anomaly detection model at IoT edge.

MODULE 22

Predictive Maintenance with AIoT

- Vibration analysis in IIoT
- Time-series AI models (RNN, LSTM)
- Case study: Motor fault detection

Lab: Train LSTM model on vibration dataset.

Program Curriculum

MODULE 23

Reinforcement Learning in IoT

- RL basics (agents, states, rewards)
- Applications: smart energy management, traffic control

Lab: RL-based thermostat control simulation.

MODULE 24

Generative AI in IoT

- Generative models for IoT (predictive simulations, synthetic data)
- LLMs for IoT management & automation
- Chatbots integrated with IoT devices

Lab: Build chatbot that queries IoT device data.

AI SPECIALIZATION

AI-powered embedded systems and IoT devices are redefining how machines sense, think, and respond in real time. This specialization takes you deep into the world where hardware meets artificial intelligence, enabling you to build devices that don't just collect data—but understand, learn, and act intelligently at the edge.

AI Capabilities for Embedded Systems & IoT You'll Build:

- Edge AI model deployment on MCUs & IoT devices
- Real-time autonomous decision-making on hardware
- Sensor intelligence & context-aware embedded agents
- Energy-efficient, optimized ML algorithms for low-power devices
- AI-driven IoT automation workflows & predictive systems
- Multi-device coordination in smart environments

This specialization places you at the center of the rapidly growing Edge AI revolution, preparing you for innovation-driven roles in embedded intelligence, industrial automation, smart consumer devices, and IoT-driven enterprises.

ADVANCED TOOLS YOU WILL LEARN

Arduino IDE:
For programming and testing Arduino-based embedded systems.

Raspberry Pi:
For edge computing, AI deployment, and hardware–software integration.

Keil uVision / MPLAB:
For ARM and PIC microcontroller development.

Embedded Linux:
For building applications on Linux-based IoT systems.

Node-RED:
For building IoT flows and dashboards without heavy coding.

Sensors & Actuators Toolkit:
For integrating environmental, motion, and electrical sensors.

ChatGPT / GenAI Tools:
For code generation, debugging, circuit explanation, and AI automation.

ESP32/ESP8266 Toolchain:
For developing IoT applications on Wi-Fi-enabled microcontrollers.

Microcontroller Programming (C/C++):
For writing firmware for embedded devices.

Proteus / Tinkercad:
For circuit simulation and hardware testing.

MQTT / HTTP Protocol Tools:
For IoT communication and device-to-cloud connectivity.

Firebase / AWS IoT Core / Azure IoT Hu):
For cloud IoT data storage and device management.

Agentic AI Tools:
For autonomous IoT task automation, device monitoring, and fault detection.

SKILLS YOU WILL MASTER

Embedded C/C++ Programming:
Writing efficient firmware for microcontrollers.

Circuit Design & Simulation:
Designing and verifying electronic circuits.

Sensor Integration:
Connecting and calibrating sensors for real-time data collection.

IoT Architecture Understanding:
Learning device–gateway–cloud communication flows.

Networking & Protocols:
Using MQTT, HTTP, TCP/IP for IoT device communication.

Cloud IoT Deployment:
Sending, storing, and analyzing device data on cloud platforms.

Edge Computing:
Running AI models and analytics directly on IoT devices.

AI Model Deployment on Hardware:
Using TensorFlow Lite or Edge AI tools on microcontrollers and Raspberry Pi.

Automation Using GenAI:
Generating code, error fixes, and optimization suggestions using AI.

Live Industry-Based Projects

Industry projects are an important part of the Embedded Systems with AI. These projects let you work on real problems from real companies. You get hands-on experience in Embedded Systems. This helps you learn practical skills and solve tough problems in different industries.

Smart Home Energy Optimization System

Description: An IoT system that monitors energy usage and uses AI to predict and reduce wastage.

Tools: Arduino/ESP32, MQTT, Node-RED, Python, TensorFlow Lite.
Outcomes: Students build an AI-driven smart home module capable of real-time monitoring and predictive energy control.

AI-Based Smart Agriculture Monitoring

Description: Sensors detect soil & weather data and AI models predict irrigation needs.

Tools: ESP32, DHT11/Soil Sensor, Cloud IoT Core, Python, ML models.
Outcomes: Students create a precision-farming solution that automates irrigation using AI predictions.

Live Industry-Based Projects

Intelligent Health Monitoring Wearable

Description: A wearable device collects vitals and uses AI to detect anomalies.

Tools: Arduino Nano, Heart-Rate Sensor, BLE, Python, Edge AI.

Outcomes: Learners develop a prototype health band capable of sending alerts based on AI classification.

Smart Traffic Control System with AI

Description: Cameras and sensors detect traffic density and adjust signals using AI.

Tools: Raspberry Pi, OpenCV, Cameras, TensorFlow.

Outcomes: Students implement an AI-powered traffic light system reducing congestion.

Voice-Controlled IoT Home Automation

Description: AI speech recognition controls lights, fans, and appliances.

Tools: ESP32, Google Speech API, MQTT, Relay Modules.

Outcomes: A fully voice-operated smart home prototype.

Live Industry-Based Projects

AI-Driven Intrusion Detection System

Description: A camera and sensors identify human movement using object-detection AI.

Tools: Raspberry Pi, PIR sensor, OpenCV, YOLO model.

Outcomes: A security system that alerts only on human detection, reducing false alarms.

Predictive Maintenance for Industrial Motors

Description: Vibration data is analyzed by an AI model to predict failures.

Tools: Arduino/ESP32, Vibration Sensor, Python, ML models.

Outcomes: A working prototype that warns before a motor breakdown.

Smart Waste Management System

Description: IoT-powered bins detect fill-level and AI predicts collection routes.

Tools: Ultrasonic Sensor, ESP8266, Cloud Dashboard, Python.

Outcomes: A smart bin system with route-optimizing AI predictions.

Live Industry-Based Projects

AI-Enabled Weather Forecasting Station

Description: Collects real-time weather data and uses AI to predict temperature/humidity trends.

Tools: ESP32, DHT22, ThingSpeak, Python ML.

Outcomes: A mini weather station with forecasting abilities.

Edge AI Face Recognition Door Lock

Description: A door lock that unlocks only when a recognized face appears.

Tools: Raspberry Pi, Pi Camera, OpenCV, Face Recognition Library.

Outcomes: Students build a secure smart lock with on-device AI processing.

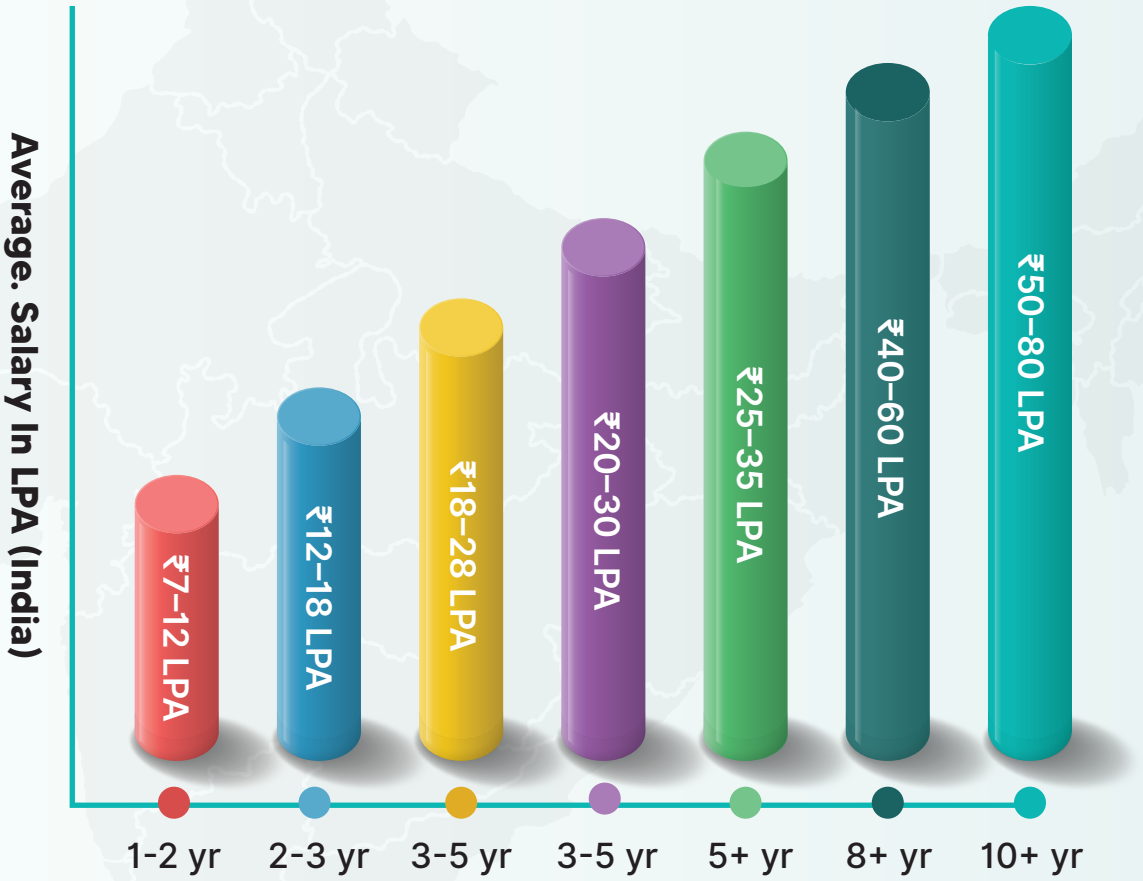

WHO SHOULD JOIN THIS PROGRAM?

- Engineering Students (ECE, EEE, CSE, IT, Mechatronics) who want to build strong practical skills in embedded systems, IoT, and onboard AI.
- Diploma & BCA/MCA Students aiming to transition into core tech roles with hands-on project experience.
- Working Professionals looking to upskill for roles in embedded development, IoT engineering, or AI-driven device design.
- Aspirants for Core Electronics Jobs who want industry-relevant knowledge and portfolio-ready projects.
- AI & Robotics Enthusiasts who want to learn how AI runs on microcontrollers, sensors, and edge devices.
- Early-Career Developers wanting to enter high-growth fields like smart devices, industrial automation, and home automation.
- Startup Founders & Innovators interested in building IoT products, prototypes, and AI-powered hardware solutions.
- Anyone Interested in Future Technologies like smart cities, autonomous systems, and connected devices.

CAREER ROLES & SALARIES

- Embedded AI Engineer
- IoT & Edge AI Specialist
- Embedded Systems Architect
- AI-Powered Firmware Developer
- Embedded AI Product Manager
- Director of Embedded AI & IoT
- Chief Embedded AI Officer

PLACEMENT SUPPORT

WE

400+ Hardware, Automotive & AI Company Partnerships

Deep-Dive Mock Interviews: Firmware, RTOS, Edge-AI, System Design

Embedded AI Portfolio & GitHub Optimization

Specialized Alumni Network for IoT & AI Referrals

Career Clinics & Networking Events

WANT YOU

CAREER SUPPORT & AI CAREER GUIDANCE

Discover Your Embedded AI Strengths & Niche

Every engineer has unique technical abilities, but many struggle to identify where they truly excel in the vast Embedded AI ecosystem. Through skill assessments, mentorship, and guided exercises, we help learners uncover their core strengths, whether it's coding efficiency, hardware optimization, or system design. This clarity allows them to choose their niche confidently and build a career that aligns with both passion and long-term growth.

Explore Roles in Embedded AI

From Edge AI Developer to IoT System Designer or Smart Sensor Architect, the embedded AI landscape offers a variety of exciting opportunities. We provide insights into these specialized roles, highlighting in-demand skills, industry applications, and future growth trends. With this knowledge, learners can evaluate multiple career tracks and confidently pursue the one that fits their aspirations and technical expertise, leading to impactful and sustainable career success.

Advanced Interview Preparation

Cracking interviews in embedded AI requires more than just technical knowledge. Our preparation modules include mock sessions, RTOS-based problem solving, model optimization challenges, and hardware-AI integration scenarios. Learners gain hands-on practice with real-world questions, enhance their problem-solving skills, and build the confidence to tackle complex technical interviews, emerging as strong contenders in the hiring process.

Portfolio Clinics: Showcase Real Expertise

In embedded AI, demonstrating skills is more powerful than stating them. We guide learners in creating professional portfolios that feature real-device demos, optimized code reviews, and whiteboard system designs. These portfolios act as proof of ability and innovation, leaving a strong impression on recruiters and employers. With a solid showcase of projects, learners stand out in the competitive job market and remain memorable long after the interview ends.

How to Enroll & Next Steps

ENROLLMENT PROCESS

Step 1: Free Consultation

- Book a free career counseling session
- Understand your career goals and fit

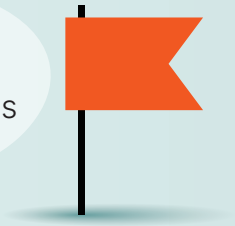

Step 2: Trial Class

- Attend one free trial class
- Experience our teaching methodology

Step 3: Enrollment

- Choose your batch timing
- Complete admission formalities

Step 4: Begin Learning

- Start your transformation journey
- Access lifetime support system

Next Batch Details:
Batch Start Date: Every Monday

Class Timings:
Weekday Batch: **7:00 PM - 9:00 PM**
Weekend Batch: **10:00 AM - 1:00 PM**

Mode:
Live Online + Offline (Noida Center)

Batch Size:
Limited to 15 students

PROGRAM FEE

₹45,999 (Including GST)

Scholarship Available Upto 30%

(Scholarship is granted based on the candidate's Work Experience, Statement of Purpose,and Academic Background.)

Payment Options

01 Full Fee Payment

1. Total Fee Payment: ₹45,999 (Including GST)
2. Admission Fees (payable on enrolment): ₹1,000

02 Installment Plan

1. Total Fee Payment: ₹45,999 (Including GST)
2. Admission Fees (payable on enrolment): ₹1,000
3. No. of Installments: 3 & 4 Months

Note:

- *Full fee will be divided into 3 or 4 monthly installments after deducting the scholarship awarded*
- *Contact your counselor for more details*

03 Loan & EMI Option

1. Total Fee Payment: ₹45,999 (Including GST)
2. Admission Fees (payable on enrolment): ₹1,000
3. Loan Amount: ₹44,999
4. No-Cost EMI Available: 3 Months & 4 Months

Note:

- *Full fee will be divided into 3 or 4 monthly EMIs after deducting the scholarship awarded*
- *Choose from our financing partners for interest-free EMI options*
- *Contact your counselor for more details*

AI-Powered Embedded & IoT Certification

Why These AI Certifications Matter?

- Industry-Recognized Credential endorsed by NASSCOM's FutureSkills Prime platform.
- Validates job-ready skills aligned with India's National Skills Framework (NSQF).
- Enhances employability with government-backed digital skills certification.
- Mapped to industry standards set by top tech companies and IT bodies.
- Boosts professional credibility with a nationally accepted qualification.
- Certifies mastery of emerging technologies demanded by leading employers.
- Supports career growth with proof of competency in specialized domains.
- Eligible for government incentives under the FutureSkills Prime program (where applicable).
- Adds weight to resumes & LinkedIn profiles for stronger job visibility.
- Recognized across IT, analytics, and AI-driven industries for recruitment and upskilling.

THE IoT ACADEMY VS OTHERS

Factors	The IoT Academy	Other Institutes
Founder Background	IIT Alumni	Varied
Batch Size	8-12 students	50-100 students
Fee Structure	₹46,999 (including GST)	₹70,000-₹1,00,000
Embedded AI & IoT Training	Comprehensive & Hands-On	Limited & Theoretical
1:1 Mentorship	Daily sessions	Group sessions only
Placement Rate	95% Success	60-70% average
Industry Partnerships	400+ IIT & AI Companies	Limited
Projects	Real Edge-AI Systems	Simulated/Basic Projects

Why Students
CHOOSE US OVER COMPETITORS

Hemant Raj
Placed in MORPHEDO

The IoT Academy's Embedded System course was a game-changer for me! The hands-on projects helped me understand complex concepts easily. I feel confident in my skills now and ready for a career in IoT!

Dharmendra
Placed in AEONX DIGITAL

I loved the Embedded System certification course! The instructors were knowledgeable and supportive. The practical experience I gained was invaluable. I highly recommend this course to anyone looking to enter the IoT field!

Ritik Verma
Placed in MORPHEDO

Completing the Embedded System course at The IoT Academy was an amazing experience. The curriculum was well-structured, and I learned so much. I now have the skills to pursue my dream job in technology!

READY TO TRANSFORM YOUR CAREER?

DON'T WAIT - THE DIGITAL FUTURE IS NOW!
